Portfolio: haythem-portfolio.web.app

Professional Summary

Frontend developer and 3D modeler specializing in cinematic websites and interactive product configurators. Designs every website in Figma before Next.js development, combining responsive interfaces with Blender modeling, realistic rendering and scroll-driven animation. Focused on reusable components and loading performance, with experience shipping a solo-developed PC game on Steam.

Technical Skills

Frontend Next.js App Router, React, TypeScript, JavaScript, Tailwind CSS, HTML5, CSS3

Interactive web Framer Motion, Three.js, 3D configurators, 360° viewers, scroll animation

3D production Blender, product modeling, PBR materials, HDRI lighting, rendering, camera animation

Design and delivery Figma, UI design, responsive UI, reusable components, image caching, asset optimization, SEO metadata

Game engines Unreal Engine 5, Blueprints, Unity 6

Selected Projects

Store 2000 | Website and Interactive 3D Configurator https://store2000.fr/simulateur/

- Developed product visualization and customization for shutters and closures, with online quote requests and agency search. Technologies: Next.js, React, TypeScript and Three.js.

RIGAT | Cinematic Product Website https://rigat.vercel.app/

- Built a Next.js and Tailwind website with animated shutter presentations, synchronized text and camera motion. Refined mobile scroll interactions, loading sequences and image caching.

RKTEC | Website Development https://equipebaie.rktec-solution.com/

- Developed the RKTEC website, presenting its digital services and business offering through frontend page layouts.

BMN Metal | Responsive Service Website https://bmn-metal.essuivi.com/

- Created service pages, animated product showcases and quote forms using Next.js, Tailwind CSS and Framer Motion, with dedicated mobile layouts.

3D CONFIG LAB | Interactive Product Showcase

- Implemented model selection, animated pricing, material controls, modal transitions and a cinematic loading introduction.

3D Product Configurators | Blender and Web Integration

- Modeled shutters and garage doors with realistic materials, lighting and camera animation. Integrated 360° image sequences and open/close animations with color, dimension and installation controls.

Panço | Website https://panco-phi.vercel.app/

Additional Experience

BEVEKY GAMES | Solo Game Developer

- Released ALWAYS: ILL in Steam Early Access in May 2025. Built gameplay and puzzles with Unreal Engine 5 Blueprints; improved performance and usability using player feedback.

Steam: ALWAYS: ILL
